Community Survey Feedback

What We Heard

Council asked the community what improvements they might like to see to the park to ensure that future changes are in line with the local community's values. The community survey undertaken in March/April 2023 identified the following key findings:

- 30% of people surveyed use the park daily, 67% use the park at least once a week.
- Most people use the park to access the beach. They also use the park facilities including playground, beach shower, and toilets.
- Four themes were identified relating to improving the function of the park, comfort for users, safety, and character.
- The landscape concept plan has been developed based on feedback from the community.

Likes

Dislikes
