

HAVE YOUR SAY ON THE DRAFT LANDSCAPE PLAN

We'd like you to review the key values for Mount Ninderry and our suggested actions and let us know your thoughts or ideas for the reserve.

We are in the early planning stages there may not be any development for a number of years and any development is likely to be small scale.

Proposed features

1 New trails

Proposed new walking trails designed to showcase Mount Ninderry's diverse landscapes, from boardwalks over rocky terrain to breathtaking views. These trails aim to deepen visitors' connection to nature while providing varying levels of difficulty and unique experiences.

The trail alignments are indicative only and subject to further feasibility and investigations.

2 Mount Ninderry story place

A new cultural and education node area featuring a series of interpretive and educational signs sharing the Kabi Kabi story of Mount Ninderry, along with environmental facts, trailhead information, Kabi Kabi artwork and other details about the reserve. This location offers breathtaking views of the coastline, Mount Ninderry escarpment and Kabi Kabi songlines.

Long term future plans include providing wheelchair-accessible car parking at this location.

3 Eastern Lookout viewing platform

Nestled into the escarpment, a proposed viewing platform provides sweeping views of Noosa, Mount Coolum, and the coastline. Providing an enriching experience, it serves as an alternative to the summit trail lookout, featuring Kabi Kabi art, cultural and environmental information.

4 Kabi Kabi and Landcare workshop shed

A new workshop shed as a base for Kabi Kabi training and Landcare volunteers. This shed will provide room for tools, workshops, and training activities, supporting community efforts to care for the land.

5 Grassland revegetation and restoration

Proposed native grasslands revegetation within the reserve, creating a sanctuary for wildlife away from busy roads. A new trail will wind through this changing landscape, allowing visitors to witness ecological restoration and observe kangaroos and other wildlife in their natural habitat.

Reserve access enhancement

Existing service entry points incorporated in trail network with controlled vehicle access options to:

- distribute visitor traffic and reduce growing pressure on the main entry and car park on Ninderry Road
- provide inclusive all abilities access to mountain top views
- maintain locked gate service entry access for reserve maintenance, bushcare volunteers and future caring for country training programs.
